DETAILED ACTION

Response to Arguments

1. Applicant's response to the last Office Action, filed 10/06/2008, has been entered and made of record.
2. Applicant has amended claims 1, 5-6, 10, 13, 15, 17-18, 21, 22, 28. Claims 27 is cancelled. Claims 1-26 and 28 are pending.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with George Liu on 3/11/2009

The application has been amended as follows:

Claim 1(Amended): A method for automatic inspection of a microarray slide, comprising one or more processors to perform the steps of:

obtaining a gray scale image of the microarray slide, wherein the microarray slide comprises one or more blocks containing arrays of spots;

binarizing the gray scale image by selecting a threshold;

morphologically dilating the binarized image so as to generate a merged component;

calculating rotational offset and translational offset of the merged component so as to align the gray scale image with a reference image;

locating the individual spots within the arrays of spots of the microarray slide; and
determining qualities of the located spots on the microarray slide by using threshold methods

4. Claims 1-26 and 28 are allowed (now renumbered claims 1-27).

5. The following is an examiner statement reasons for allowance. Claims 1 and 22 are allowed over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found no motivation to combine any of said prior art which teaches a method for automatic inspection of a microarray slide, where the method comprises obtaining a gray scale image of the microarray slide, wherein the microarray slide comprises one or more blocks containing arrays of spots, binarizing the gray scale image by selecting a threshold, **morphologically dilating the binarized image so as to generate a merged component, calculating rotational offset and translational offset of the merged component so as to align the gray scale image with a reference image, locating the individual spots within the arrays of spots of the micro array slide**, and determining qualities of the located spots within the arrays on the microarray slide by using threshold methods.

Ganz et al (US 6,558,623) teaches a microarrayer, comprising dispense heads (6, 40) for spotting slides (4A1, 4E10), light sources for illuminating slides, cameras (12) for acquiring and transmitting slide image data, and computer programmed to receive and analyze slide image data and generate post analysis data, is new. The post analysis data is available for improving the dispensing of the solution.

Bajcsy Steven (GRIDLINE: AUTOMATIC GRID ALIGNMENT IN DNA MICROARRAY SCANS) teaches grid alignment algorithm is novel in the sense that (1) it can detect irregularly row- and column spaced spots in a 2D array, (2) it is independent of spot color and size, (3) it is general to localize a grid of other primitive shapes than the spot shapes, (4) it can perform grid alignment on any number of input channels, (5) it reduces the number of free parameters to minimum by data driven optimization of most algorithmic parameters and (6) it

has a built-in speed versus accuracy tradeoff mechanism to accommodate user's requirements on performance time and accuracy of the results. The developed algorithm also automatically identifies multiple blocks of 2D arrays, as it is the case in microarray images, and compensates for grid rotations in addition to grid translations.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to NANCY BITAR whose telephone number is (571)270-1041. The examiner can normally be reached on Mon-Fri (7:30a.m. to 5:00pm).
